Your options to participate: book your individual space or exhibit in a joint pavilion.

Exhibiting is worthwhile

There are good reasons to participate in LASER World of PHOTONICS INDIA. See for yourself:

LASER World of PHOTONICS INDIA revolves around innovative products and their industrial solutions and applications, reflecting the actual developments in the industry. Our years of experience with LASER World of PHOTONICS in Munich and Shanghai enable us to provide you with more than just an exhibition stand. That means competence, contacts and a competitive edge to promote an entire industry. Including your company.

- [LASER World of PHOTONICS INDIA strengths](#)
- [What exhibitors say about LASER World of PHOTONICS INDIA](#)

Our main strengths are:

-

We offer high service and international standards

As organizer of the world's leading trade shows for photonics, we built up a network of international trade fairs and global partnerships with the most important trade associations and media outlets.

We get support from associations such as Optical Society of India (OSI), Indian Laser Association (ILA), Photonics Society of India (PSI), The Optical Society (OSA), Spectaris and OptecNet Germany.

- 

The audience we address is incomparable

Experts from universities and institutions, target customers from different industries and group buyers show us the market's needs, the latest research results and countless business opportunities. The third edition played host to 103 exhibitors and 6,667 trade visitors, which came from industry sectors ranging from automotive, to telecommunications, from medical to diamond, as well as from research institutes.

- 

We have a high quality accompanying program

With the help of industry associations like The Optical Society and Optical Society of India and industry leaders, the exhibition is a platform where researchers, engineers and scientific experts can exchange their ideas, share their visions, demonstrate their innovative spirit and communicate their practices and experiences.
